

PROBIOTIC TESTING

Dedicated expertise providing insights, guidance, and testing to help you deliver the highest quality probiotics products

Probiotics provide a lot of opportunities and benefits in a wide range of products. However, these unique ingredients provide unique challenges, from formulation to food safety to production. Low counts and variability make product formulation and release difficult, costing time and money.

Why Us? It's vitally important to have the right information about your product or material. Our teams have spent years developing methods that work with the wide range of probiotic strains and the wide range of product applications as this market has expanded. We are the industry leader in probiotic testing and continue to drive technology forward so that we can deliver the most accurate results to you faster. This means you have the information you need to create exciting new products and get them to your customers faster than ever.

Our team of dedicated probiotic experts will work directly with you at each stage of the process to choose the right tool for the job. By partnering to develop a program and approach tailored to your specific product, you'll get the data you need to move forward.

Save your team valuable time. Seamless integration between our industry-trusted analytical and microbiological teams means you submit samples to the same lab, talk to the same dedicated customer service associate, and get results from the same system.

Our Solutions:

- Largest suite of plate count methods for routine enumeration
- Pathogen testing designed specifically for probiotics
- Flow cytometry for faster enumeration and better understanding of live and dead cells
- Microbiome analysis
- Strain identification by PCR
- Product development services
